

An aerial photograph of the Drin River Basin, showing a wide river flowing through a lush green valley. The river is surrounded by dense forests and rolling hills. Several small towns and villages are visible along the riverbanks, with houses and buildings scattered across the landscape. The sky is clear and blue, and the overall scene is one of natural beauty and tranquility.

Act4Drin Spring School

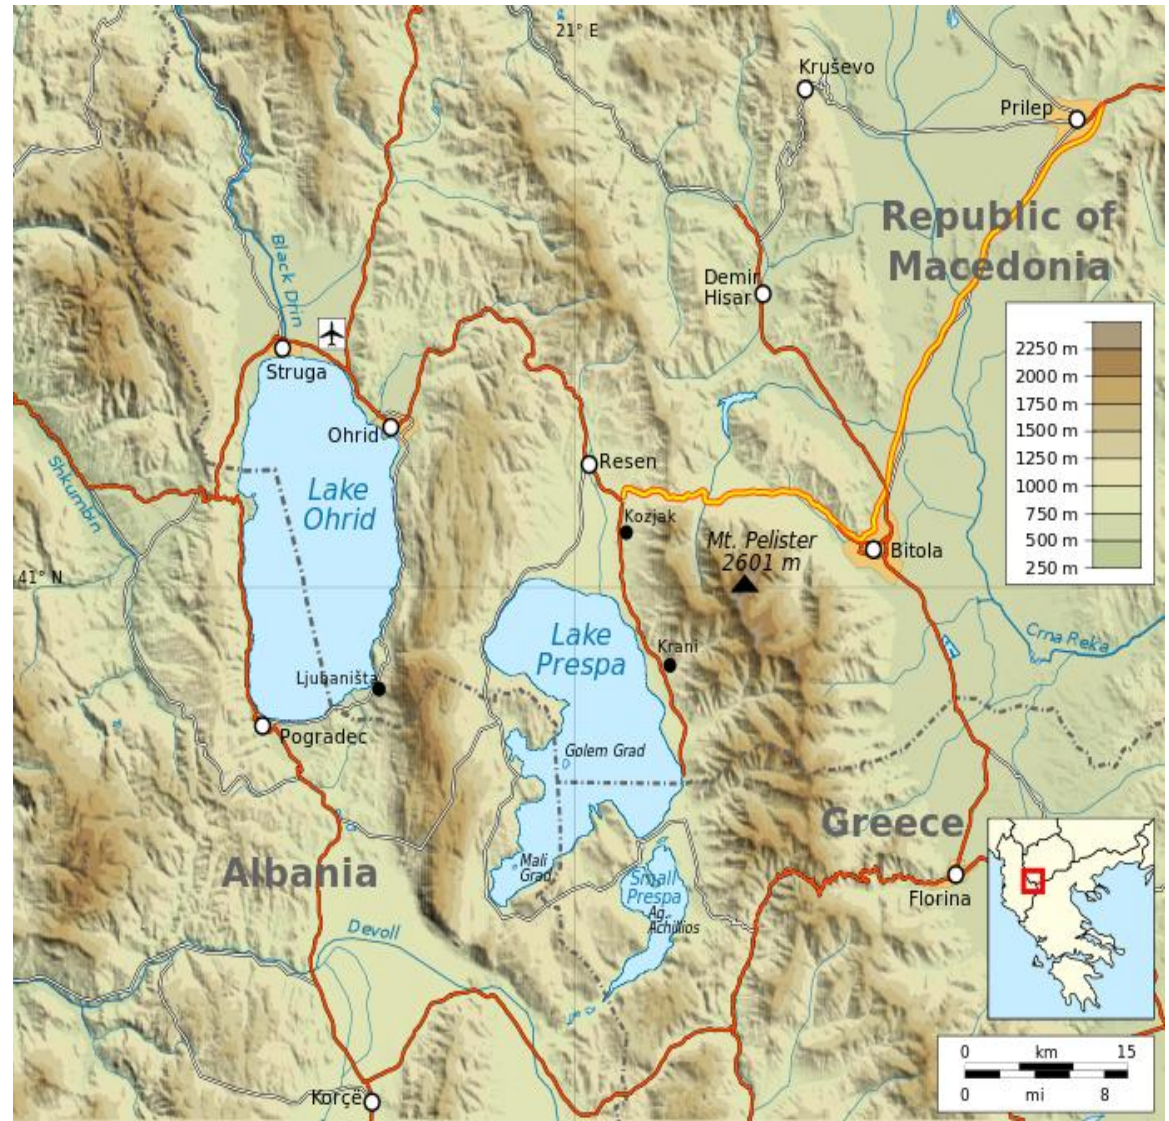

Benefits from Drin River Basin

Hamid Merdita

➤ The Drin starts at the confluence of its two headwaters, the Black Drin in the city of Struga and the White Drin in the city of Kukes in the Trektan area of eastern Albania.

➤ Black Drin
(*Drini i Zi* in
Albanian; *Crn
Drim* in
Macedonian) flows
out from the Lake
Ohrid in Struga and
runs through
the Republic of
Macedonia and
Albania.

➤ The water of Drin River flows from the Ohrid Lake Basin which is very important for his existence and for the ecosystem of Drin.

The Drin is extremely important for the Albanian economy, especially for energy power. Four hydropower facilities produce most of Albania's electricity (over 1200MW capacity). Lake Fierza, Vau i Dejes Lake etc.

The Drin River is surrounded by mountainous areas, fauna and flora has a great variety. There are grown 40 rare species in Ohrid Lake, one of them is the fish named Korani (*Salmo letnica*).

➤ Drin River Basin
have a great
influence in the
creation of
microclimate zone
which is important
for much activities
in the economy and
wildlife.

Drin River have a
much of values:

- Ecological value
- Economical
value
- Estetic value

THANK YOU FOR ATTENTION
